

RISK SUMMARY

Estimated reading time: 2 min

Due to the potential for losses, the Financial Conduct Authority (FCA) considers this investment to be very complex and high risk.

What are the key risks?

1. You could lose all the money you invest

- If the business you invest in fails, you are likely to lose 100% of the money you invested. Most start-up businesses fail.
- Advertised rates of return aren't guaranteed. This is not a savings account. If the issuer doesn't pay you back as agreed, you could earn less money than expected or nothing at all. A higher advertised rate of return means a higher risk of losing your money. If it looks too good to be true, it probably is.

2. You are unlikely to be protected if something goes wrong

- Protection from the Financial Services Compensation Scheme (FSCS), in relation to claims against failed regulated firms, does not cover poor investment performance or investments in unregulated collective investment schemes. Try the FSCS investment protection checker [here](#).
- Protection from the Financial Ombudsman Service (FOS) does not cover poor investment performance. If you have a complaint against an FCA-regulated firm, FOS may be able to consider it. Learn more about FOS protection [here](#).

3. You won't get your money back quickly

- Even if the business you invest in is successful, it may take several years to get your money back. You are unlikely to be able to sell your investment early.
- The most likely way to get your money back is if the business is bought by another business or lists its shares on an exchange such as the London Stock Exchange. These events are not common.
- If you are investing in a start-up business, you should not expect to get your money back through dividends. Start-up businesses rarely pay these.

4. Don't put all your eggs in one basket

- Putting all your money into a single business or type of investment for example, is risky. Spreading your money across different investments makes you less dependent on any one to do well.
- A good rule of thumb is not to invest more than 10% of your money in [high-risk investments](#).
- This makes it difficult to predict how risky the investment is, but it will most likely be high.
- You may wish to get financial advice before deciding to invest.

5. The value of your investment can be reduced

- The percentage of the business that you own will decrease if the business issues more shares. This could mean that the value of your investment reduces, depending on how much the business grows. Most start-up businesses issue multiple rounds of shares.
- These new shares could have additional rights that your shares don't have, such as the right to receive a fixed dividend, which could further reduce your chances of getting a return on your investment.
